

PUBLIC LECTURE

FAITH AND SCIENCE

COLLABORATIVE RESEARCH FORUM

At The University of Hong Kong

The Human-Technology Interface

Prof Bob Fortner
Palm beach Atlantic University

6th April, Friday
7:00 pm, KB 2.23,
Knowles Bldg., HKU

Humans, through the application of advanced prosthetics and neural interfaces, are rapidly moving toward the *\$6 Million Man*. Robots, with the application of general artificial intelligence, are rapidly moving toward human cognitive abilities, self-learning, and replication. Somewhere in the middle, flesh will meet steel as these two trends merge. What, then, will be human and what will be technology? Does it matter for the human condition? As these issues move from science fiction to science fact, this exploratory talk will consider questions that will face all humanity in the coming decades.
