

Climate Change and the End of the World

DISCUSSION

Dr Jonathan Moo

Whitworth University

4th October, Friday

10 am, HKU. Room TBC.

Visions of a future with entire civilisations laid waste used to be the preserve of religion. In recent years, however, scientists have joined in on the action. “Apocalypse,” whether understood in its technical sense as “revelation” or in its popular sense as “end of the world as we know it,” is a powerful way of creatively reimagining the world and of introducing questions of value and significance into discussions of climate change. This discussion will bring together people from across disciplines to discuss the paper “Climate Change and the Apocalyptic Imagination: Science, Faith and Ecological Responsibility” [*Zygon* 50 (2015) 937] with the author.

Jonathan Moo is Jonathan A. Moo, Ph.D. (Cantab), is the Edward B. Lindaman Endowed Chair and associate professor of New Testament and Environmental Studies at Whitworth University in Spokane, Washington. He teaches and writes in the areas of New Testament, early Judaism, environmental ethics, and science and faith.
